

I'm Spike, as you can see, I'm a corona virus.

I've been busy around town as you may know. The news gets it some what right, but I needs to set some things straight!

My weapon is Spike Protein. It can cause all kinds of damage! You'll get sick differently, depending on where I stick it. It's all fair game, lungs, heart, brain... all the usual spots.

\* Source material on SaltyCentral.com

The Spike Protein attacks the reproductive organs causing miscarriages and infertility.

The Spike Protein also causes blood clots which triggers strokes, heartattacks and death!

But I'm getting a bad rap, not all Spike Protein damage is my fault!

Scientist found a way to alter human genes so that they produce Spike Proteins without the virus. They say its mild and short term. It's just enough for the body to produce anti-bodies

Scientists don't know the effects! They haven't been able to get a corona vaccine approved in ten years. Their test animals tend to die! I guess the general population are their guinea pigs now. Some will produce less Spike Proteins and others way too much. There are even chances that it will become permanent! Their body will always produce this toxin!

They are finding that the new Spike Proteins that your body is producing doesn't stay just in your body. You can "radiate" Spike Proteins that can harm others!

And they call me the villain! How could a human promote this?!?

\* Spike proteins are smaller than they appear!

If you had the COVID injections or around someone who has and you have these symptoms: Fatigue, weakness, headaches, muscles aches, bruising, inflammation, nose bleeds, heavy menstrual, off cycles, post menopause bleeding, or unexplained rashes.

Please see a doctor who is familiar with the I-MASK protocol.
